EDUCATION

Rutgers University

B.S. in Computer Science, Concentration: Data Science

GPA: 3.68 | Dean's List, Cum Laude

Newark, New Jersey

May 2024

EXPERIENCE

Prime Source Purchasing

Data Validation & Analytics Associate

Rochelle, New Jersey

Dec 2025 - Present

- Reviewed and validated system-generated match suggestions across distributor master data records, confirming accurate entity matching and resolving mismatches through cross-functional coordination and manual investigation.
- Built and maintained ETL-adjacent data pipelines reconciling distributor datasets against internal records, ensuring consistency and completeness prior to ingestion into downstream business intelligence and reporting systems.
- Identified and corrected data quality issues including duplicates, missing fields, and mismatched records; maintained audit trails and improved dataset reliability for stakeholder dashboards and operational decision-making.

Trader Joe's

Section Leader

Paramus, New Jersey

Sept 2021 - Aug 2024

- Led cross-functional daily operations and drove process improvements across departments, achieving a 15% efficiency gain by analyzing KPIs and translating performance metrics into data-informed decisions for senior stakeholders.

PROJECTS

Sports Data Analytics - Basketball Modeling

Independent Project

Dec 2024 - Feb 2026

- Designed and maintained a longitudinal dataset; built an end-to-end data pipeline in Python and Excel to evaluate scoring efficiency, shot selection, and usage patterns across one year of recorded sessions.
- Performed feature engineering to create custom metrics (eFG%, rolling averages, variance measures) and applied statistical modeling to distinguish performance signal from noise in small-sample data.
- Developed dashboards and visualizations to surface behavioral patterns and communicate improvement trajectories to non technical stakeholders, demonstrating end-to-end data analysis workflow.

Quantitative Research - News-Driven Return Prediction

Independent Project

Dec 2025 - Jan 2026

- Built a leakage-aware machine learning model using NLP and Ridge regression to predict same-day equity returns from overnight news; applied feature engineering via TF-IDF vectorization with a strict time-based train/test split.
- Achieved ~57% directional accuracy over a zero-return baseline; evaluated model performance using RMSE and directional accuracy, applying statistical modeling best practices for reproducibility.
- Documented end-to-end data pipeline design, feature engineering decisions, model limitations, and next steps, demonstrating rigorous quantitative research and data engineering workflow practices.

SKILLS

Languages & Tools: Python, R, SQL, Pandas, NumPy, Scikit-learn, Matplotlib, Git, Jupyter

Data & BI: ETL, Data Modeling, Data Pipelines, Data Wrangling, Machine Learning, Statistical Modeling, Feature Engineering, NLP, Tableau, Power BI, Looker, Excel

Concepts: Data Quality, Data Validation, Business Intelligence, Dashboards, KPIs, Cross-functional Collaboration, Process Improvement, Stakeholder Reporting
